

Headaches

1. How are you able to determine this is or isn't a sinus infection?

2. What symptoms should cause me to recontact your office?

If you are not clear, please ask your Practitioners to rephrase their response in a different way.

3. Is there anything I need to be aware of if I take over-the-counter or prescription medicines?

Please be sure you fully understand how you are meant to take the suggested medicines and ask your Practitioners any questions beforehand. You are not bothering them; your safety is their priority.
